## Spring Tension \& Compression Testing Machine

Model TLW Series Micro-computer Controlled Spring Tension \& Compression Testing Machine ISO9001 International Quality Certificate

TLW-500,1000,2000,5000,500I, 1000I,2000I,5000I

TLW-(5000),10000,20000,(5000I), 10000I,20000I

## Main Applications:

The tester is mainly used for carrying on intensity test, mechanics performance and process capacity analysis of various kinds of springs.

## Main Features:

- The software consists of function modules such as speed control, parameter input, data processing, result observation, record retrieval, chart display \& print, data storage, etc.
- Diversified testing methods: test of residual height and deformation of spring under pre-set testing load; test of testing load under preset height or deformation of spring, etc.
- Multiple points data auto-collection: avoid the impact of spring stress on the testing data. Thus the total testing process is completely automatic.
- Overload protection and thus keep the load cell free of damage.
- Powerful data-processing and statistic functions; able to plot stiffness curve, calculate spring segment stiffness, plot the normal distribution curve, calculate the index of process capability, etc.
- Stable and reliable operation and accurate measurement powered by the drive system which is constituted by CNC Motor speed-control system or imported advanced AC servo speed-controller as well as its motor and

Main Technical Specifications:
