

UC Rod (Union Coating Rod)

The UC Rod is a coating rod made by precise form rolling, and has a special feature not shared by a wire bar. The amount of coating can be precisely controlled by changing the UC Rod. This can be utilized in various industries which require precise coating, such as film and paper. The technology we have developed over the years has enabled us to achieve precise rolling with very accurate uniformity.

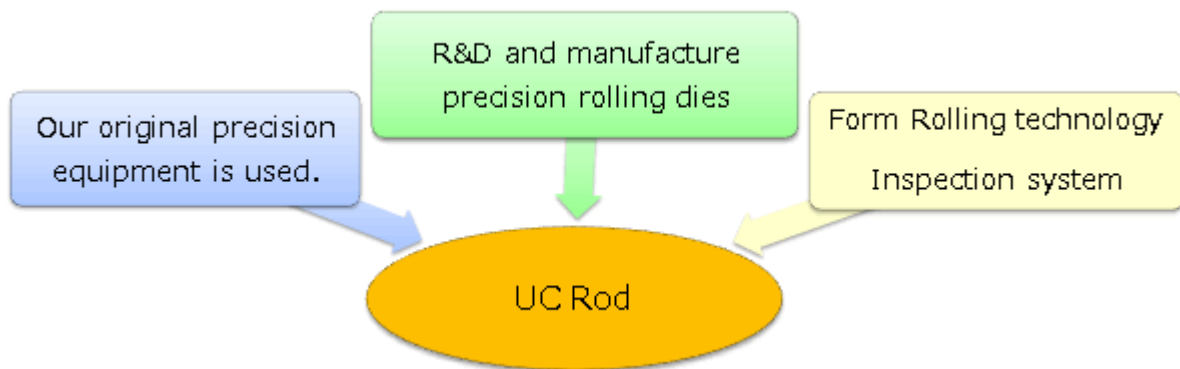

Feature of UC Rod

- The groove bottom is wider than wire bar. This makes for easier cleanup and reduces clogging.
- The groove shape is not limited to the arc shape. The shape of the groove can be varied.

- UC Rod is manufactured using our in house precision equipment. -> We also welcome the special requirements in rolling dies and UC Rod. UC Rod can be made in Various lengths and diameters.

- Stringent inspection : It guarantees high quality coating rod.
- Surface treatment can be selected.
