

Scuff Tester

To measure the rubproofness of printed paper, carton packs & boards with contact pressure are applied. Two discs rotate the contacts in contact at the same angular velocity, providing a relatively constant speed between all points of the disk. The die weight is exchanged and the electrical system is pushed

Feature

Motor : Single Phase 60W, 220 V, AC

Spesification

- Two contact discs rotate in contact at the same angular speed giving constant relative velocity between all points of the disc. Pressure applied to upper disc by interchangeable deadweight.
- Uniform rubbing achieved in all direction.
- Top plate position adjustable . Dust and particles may be removed by air blast.
